Public Safety Power Shutoffs

- It is not a decision we take lightly. It is done to keep you and your community safe.
- We have been able to limit the number of customers impacted by PSPS by using sectionalizing devices to de-energize segments instead of entire circuits.
- It will have to remain available as a tool to mitigate wildfire risk during severe weather and high fire potential index events.

We urge customers to update their contact information and sign up for PSPS alerts at: sce.com/outage. To learn more about Public Safety Power Shutoffs, visit: sce.com/safety/wildfire

COVID-19 Assistance Policies Are Ending June 30th

We know the past year has been hard for many of our customers. While these policies are coming to an end, our commitment to our customers will never change. We're here to help with a variety of assistance options to continue to support you. Learn more at:

sce.com/findsupport

Thinking of Installing Solar?

SCE's Marketplace makes the shopping process easier. Simply enter your address, type of residential dwelling and average monthly bill to find out if going solar makes sense. If it does, you will get a rooftop solar and storage system tailored to your home, bids from a network of vetted solar installers, financing options, and a dedicated energy advisor to assist you through the entire process. Plus, you will also receive a \$500 Marketplace discount from SCE. And you may save more by having multiple companies compete for your business. For details, go to:

<https://marketplace.sce.com/solar/>

**SCE's solar and storage marketplace is run by Pick My Solar, a third-party company not affiliated with SCE. SCE does not endorse, or accept any liability for, the content of, services or products sold on any third-party websites.*

Get Help If You Use Medical Equipment

If you or someone in your household requires the regular use of electrically-powered medical equipment or other qualifying medical devices, you may be eligible for our Medical Baseline Allowance program.

This program provides an additional 16.5 kilowatt hours (kWh) of electricity per day. Provided at the lowest baseline rate, this helps offset the cost of operating the medical equipment and prioritizes critical alerts and notifications if outages occur, including Public Safety Power Shutoffs.

Changes during COVID-19

Due to the COVID-19 pandemic, we have temporarily changed how to enroll and recertify for the program:

- Enrollment: You can now enroll online (link below) and without a physician's signature for a period of one year beginning March 4, 2020.
- Renewal: If you are due to renew between March 4, 2020, and March 4, 2021 we will automatically extend your enrollment for one year.

To learn more, apply online or download an application please visit sce.com/medicalbaseline or call **1-800-655-4555**.

NOTES: All customers who depend upon electrically-operated medical equipment should be prepared at all times with a back-up plan or power system to ensure their health and welfare during outages. SCE does not provide back-up generation.

Devices used for therapy but not medically required for sustaining life do not qualify for this program.

** For Santa Catalina Island gas customers, the standard Medical Baseline Allocation will be 0.822 therms per day.*

Support for Customers Affected by a Major Disaster

If you or someone you know has been affected by a disaster for which a state of emergency has been declared, please visit sce.com/disastersupport for information about consumer protections, programs and services SCE has available.

Proposition 65 Warnings

 **WARNING:** The Safe Drinking Water and Toxic Enforcement Act of 1986, commonly referred to as Proposition 65, requires the governor to publish a list of chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. It also requires California businesses to warn the public of potential exposures to these chemicals that result from their operations.

Providing safe and reliable service to all of our customers is a top priority for Southern California Edison and we want you to be aware of these chemicals so that you can reduce exposure to chemicals associated with electricity generation and distribution. We handle all equipment and materials at our sites carefully for your good health as well as ours. However, if you are at or near our facilities and work sites, you can be exposed to the following chemicals on the state's Proposition 65 list. Reduce, limit, or avoid activities at and near the sources of exposure described below. For more information go to:

www.P65Warnings.ca.gov

1. **Diesel Generation:** Diesel Exhaust: SCE uses diesel-fueled emergency generators during emergencies and other times to help minimize the interruption of our customers' supply of electricity. The generators are used at some SCE facilities like substations and service centers, and at locations where repairs are made to the electrical system. SCE also uses diesel as the primary fuel for electricity generation on Catalina Island and in many service vehicles used throughout our service territory. Diesel engines produce exhaust as a by-product of the combustion of diesel fuel. Breathing diesel engine exhaust exposes you to chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. You should avoid breathing diesel fumes whenever possible.

2. **Wooden Utility Poles:** SCE uses wooden poles that have been treated with chemical preservatives. These chemicals include pentachlorophenol, which is known to the State of California to cause cancer, and petroleum products such as diesel fuel, which contains chemicals including toluene and benzene that are known to the State of California to cause cancer and birth defects or other reproductive harm. If you come into contact with a wooden utility pole or the dust, debris, soil surrounding the pole, or water runoff that may contain dust, debris, and soil previously in contact with the pole, you could be exposed to these chemicals. Avoid contact with wooden utility poles and the dust, debris, soil surrounding the poles, or water runoff that may contain dust, debris, soil surrounding the poles, or water runoff that may contain dust, debris, and soil previously in contact with the poles.

3. **Painted Structures:** SCE utilizes metal and wood structures and equipment that may have been coated with paints containing chemicals, such as lead-based paint, that are known to the State of California to cause cancer and birth defects or other reproductive harm. When the paint on these on these structures deteriorates, flakes of paint can impact the soil adjacent to the structure. To avoid exposure, you should avoid contact with any paint flakes or soil near any structure with deteriorating paint.

Health and Safety Tips for Temperature-Sensitive Customers

Extreme hot weather may be harmful to people who are in poor health or those who are sensitive to high temperatures. Here are steps you can take to avoid heat-related illness this summer, should you be without air conditioning. To help you stay cool in hot weather:

- Take a cool shower or bath.
- Wear lightweight, loose, light-colored clothing and a head covering.
- Stay out of direct sunlight and limit outdoor activity to covered or shaded areas.
- Drink plenty of water to stay hydrated.

What to Do During Rotating Outages?

A rotating outage is a temporary electricity outage, designed to last no more than one hour, to help protect the integrity of the overall electric system. You can prepare for rotating outages by planning ahead. Your rotating outage group number is located at the top of your bill. Customers in rotating outage group N001 (or "Exempt") are normally not subject to rotating outages.

We strongly encourage you to be prepared for summer heat waves and potential outages. Power outages, regardless of their cause, can occur at any time. Since we cannot guarantee uninterrupted service to our customers, it is important that your emergency plan includes having sufficient standby battery power or a back-up portable unit available to power any in-home medical equipment you may have. If you have back-up power generation, we recommend you test it each month to ensure it is ready in case of a power interruption.

Advance Notification of a Rotating Outage

When possible, we will provide advance notice of a rotating outage via an automated telephone message to residential customers, or to someone in a customer's household who files an application certifying that their health is at risk when they are exposed to extreme temperatures.

Note: If you already participate in our Medical Baseline program, you are automatically enrolled, so you do not need to complete this application form. Medical Baseline program participants receive advance notification, whenever possible, of rotating power outages that may affect them.

To sign up for advance notification, just call **1-800-655-4555** to request an application, complete it, and return it to the address shown on the application.

Upon receipt of your application, we will place your name on a calling list to receive advance notice, whenever practical, if a rotating outage is anticipated in your area. This service will be provided to you at no cost.
