

Your Electric Bill Outlook

We want to make our business customers aware of the potential for rate changes in early 2009 to allow you to plan and to give you time to take advantage of programs that can help you manage your bill.

We are investing in technology and resources to bring about a cleaner, smarter reliable energy future. Our field experts are working tirelessly every day to deliver dependable electric service to you.

Closely monitoring your business' electricity usage and making simple adjustments can help you reduce costs. Here are a few tips to help you start saving today:

- ❑ Maximize natural light by opening window coverings during the day and turn off lights when not in use.
- ❑ Switch off and unplug electrical items when not in use, as plugged in items still use power even when turned off.
- ❑ Follow manufacturers' suggestions for changing filters on your heating and cooling equipment and keep vents clear – this helps clean air to flow while using less power.

You can also take advantage of our many energy-management tools and rebates and savings programs:

- ❑ SCE's business incentives and service programs offer cash rebates towards the purchase and installation of qualified energy-efficient equipment.
- ❑ Smaller business customers can find out how to save by completing SCE's online Energy Survey. The results provide recommendations to reduce your energy usage and lower your bill, in addition to rebates, incentive offers, and valuable savings tips tailored to your needs.
- ❑ Larger business customers can enroll in Demand Response programs that provide significant discounts, incentive payments, and bill credits for shifting usage to non-peak hours.
- ❑ Larger businesses can manage and optimize energy usage and savings with our Energy Manager® suite of tools.

Our customer care specialists are ready to answer your questions and to assist you with programs and options to help you save energy and money – keeping your business competitive.
