Southern California Edison West of Devers (WOD) Upgrade Project Activity

Southern California Edison (SCE) is building the West of Devers Upgrade Project to provide the additional capacity necessary to bring renewable and conventional generation being developed in desert areas around Blythe and Desert Center, California. These significant upgrades will enhance electric reliability for all customers and help to make the power grid greener for California.

Temporary Electrical Facilities and Helicopter Operations: In order to maintain the current level of electrical service to the community and for the safety of our employees during WOD construction, SCE will install temporary electrical poles (shooflys) prior to the removal of existing towers and installation of new towers. These tubular steel poles between approximately 80 and 150 feet tall, will be installed within the existing right of way and will be removed after the new towers are erected sometime in 2020. Helicopters will be used to support construction activities in this area starting at the end of November 2018 and continuing intermittently for the duration of the project.

NOTICE OF CONSTRUCTION

Project Location Map

Every effort will be made to reduce the amount of noise generated by activities related to construction. SCE understands that construction may be inconvenient to residents, businesses, and visitors. We greatly appreciate your patience as we move to complete construction as quickly and safely as possible.
